

Initial Notes for dimensions

Pixel 7 (Mobile size in general)

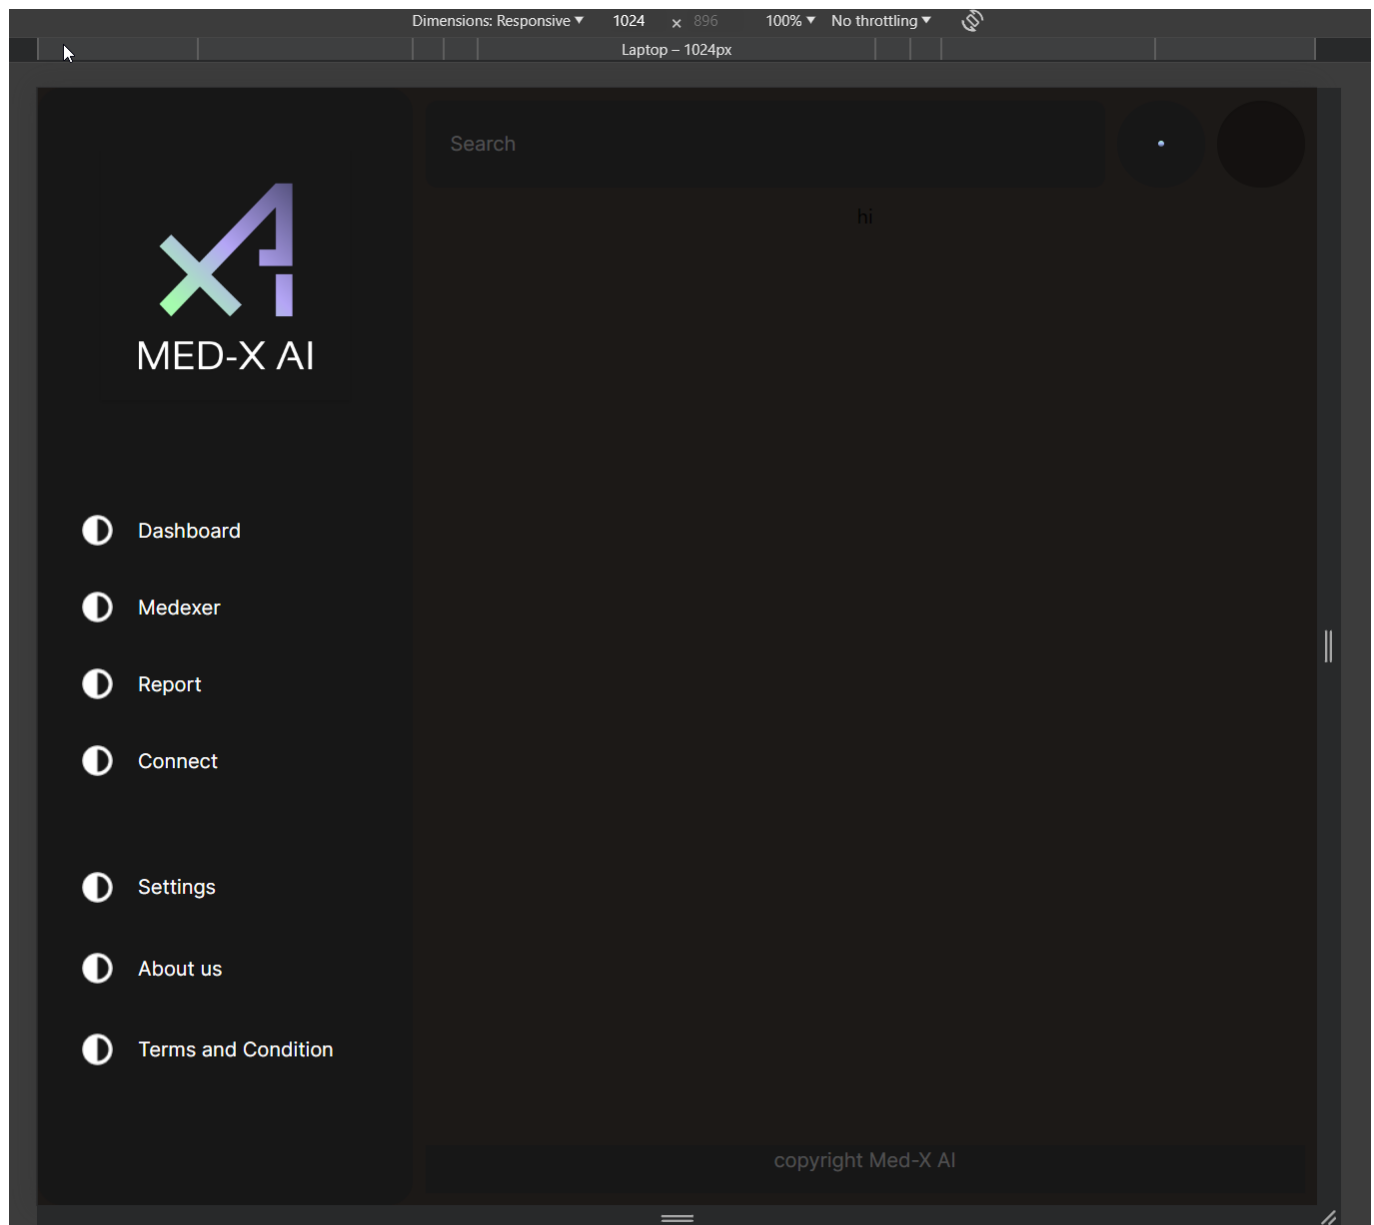

- As you can see, the search bar is cut off, along with the two circles that appear next to the search bar
- Copyright is cut off as well
- I changed the height to 700px to fit on one page, FYI. Original height is 915px
- **SUGGESTION**
 - I know our app isn't tailored for mobile, however, would it be possible to a hamburger menu if someone is on mobile? If it's not a priority or needed, we can ignore this suggestion.

Tablet screen

- Everything shows up on the screen
- **Observation**
 - Does the right side where the image is going to go look kind of small to y'all?

Laptop Monitor

- Everything shows up properly.
 - **QUESTION**
 - Does our left side with the logo and options take up too much space for this screen size?
-

1440P Monitor

- Everything shows up on screen
 - **OBSERVATION**
 - This looks like the sweet-spot in terms of spacing for me. If I was a user, this kind of layout is one I would enjoy.
 - Also, do you think our colors are kind of dark? Perhaps it will look better after we populate the screen.
-

4K Monitor

- Everything shows up on screen.
- Copyright logo could be centered better
- **OBSERVATION**
 - It looks too wide now, right? This screen size is for multiple photos, in ,my opinion

Final Thoughts

1. Great first web-page.
2. Don't read an observation or suggestion and suddenly start trying to do @media or margin-top or something like that. We can discuss as a team.
